

PHASE 1 STATEMENT OF WORK

Noblestride Capital x Lua

Investment Operations Platform: CRM and Agents

CLIENT Noblestride Capital Investments Ltd	ENGAGEMENT Phase 1 client SOW and build sign-off	ISSUED 4 June 2026	VERSION Client review draft
---	---	-----------------------	--------------------------------

Summary

Lua will configure a Phase 1 investment operations platform for Noblestride. The CRM and workflow layer is the foundation. The agents sit on top of that layer to capture intake, support investor matching, track investor engagement, structure communications, and support controlled investor visibility.

01 | PURPOSE

This document sets out the client-facing scope for the Phase 1 Noblestride x Lua build. It is written for sign-off and intentionally avoids the internal field-by-field configuration detail.

The aim is to give Noblestride one structured operating layer for managing companies, mandates, investors, referrals, documents, communications, tasks, and deal progress. The agents are configured around that layer.

02 | WHAT WE ARE BUILDING

Workstream	What It Covers	Outcome
CRM and deal management	Core records for companies, deals, investors, contacts, partners, service providers, tasks, documents, communications, and investor-deal engagement.	A single operating view of the pipeline and transaction activity.
Client Agent	Handles inbound client or prospect messages, captures intake details, summarizes next steps, and creates follow-up tasks.	Cleaner intake and faster handoff to the right deal lead.
Investor Agent	Supports investor correspondence, captures	Investor records stay current and

	changes in investor criteria, drafts outreach, and logs investor feedback.	outreach is easier to track.
Investor matching and intelligence	Identifies and ranks relevant investors for a mandate using sector, geography, ticket size, instrument, deployment status, restrictions, and relationship history.	The team can shortlist investors faster with a clear match rationale.
Investor Tracker Agent	Tracks each investor's progress on each deal, including NDA, IM, VDR, DD, term sheet, offer, invested, or declined.	Noblestride can see where every investor stands on every live mandate.
Referral and partner tracking	Tracks originators, introducers, partner details, fee-sharing status, and referred deal conversion.	Referral performance and partner obligations become visible.
WhatsApp and email capture	Structures relevant deal updates, action points, data requests, and follow-ups from WhatsApp and email.	Important communication no longer stays buried in chats and inboxes.
Website intake and qualification	Collects structured fundraising lead information, screens for first-pass qualification, and routes qualified leads for review.	Inbound leads enter a controlled review queue instead of becoming scattered messages.
Investor deal visibility	Gives approved investors a controlled view of matching opportunities with NDA and due diligence gates.	Investors see the right level of information without exposing internal or confidential data.
Dashboards	Pipeline, deal status, investor engagement, referrals, tasks, disbursement, and team workload views.	Management visibility across the operating workflow.

03 | CRM AND OPERATING LAYER

This build is CRM-first. Before agents can be useful, Noblestride needs a clear operating layer that defines what a company is, what a deal is, who owns it, what documents exist, which investors are involved, and what actions are pending.

Lua will configure and develop this operating layer around Noblestride's workflow, records, approvals, and access controls.

The working model is simple: the company or target is the central business record, every mandate belongs to a company, and each deal becomes its own communication universe. Tasks, documents, investor activity, partner activity, and correspondence should tie back to the relevant deal wherever possible.

Core Record	Purpose
Company / Target	The business seeking capital or advisory support.
Deal / Mandate	The fundraising or transaction mandate being managed.
Investor and Investor Contact	Capital providers and their relevant points of contact.
Investor-Deal Engagement	One investor's activity, interest, status, term sheet, DD, and disbursement on one deal.
Referral / Partner	Originators, introducers, consultants, and fee-sharing relationships.
Task, Document, Communication	The operating history around each mandate.
Service Provider	Law firms, audit, tax, ESG, technical, and other advisors involved in a deal.

04 | WORKFLOW COVERAGE

Phase 1 covers the practical workflow from lead intake through investor engagement and transaction tracking.

- Opportunity intake from website, email, WhatsApp, referrals, LinkedIn, direct enquiries, and business development.
- First-pass qualification using Noblestride's current criteria, including operating history, audited financials, revenue, funding need, sector, geography, profitability, and risk factors.
- Manual review before a lead becomes an active deal.
- Deal tracking across document preparation, investor outreach, NDA, IM, VDR, due diligence, term sheet, offer, close, disbursement, success fee, and post-transaction follow-up.
- Investor matching based on sector, geography, ticket size, instrument, deployment status, mandate, restrictions, and relationship history.
- Referral and partner tracking from introduction through conversion, status, and fee-sharing visibility.

05 | CHANNELS AND INTEGRATIONS

Channel / System	Use in Phase 1	Notes
WhatsApp	Capture deal updates, task assignments, follow-ups, and relevant client or investor requests.	External actions remain behind human approval.
Outlook / Email	Capture formal correspondence, investor outreach,	Subject to Microsoft 365 access.

	feedback, and client communication.	
Website / web chat	Run the intake and qualification agent for prospective fundraising clients.	Does not onboard clients automatically.
SharePoint / document storage	Store or link deal documents, VDR material, and transaction files.	Subject to API/admin access.
Slack / internal channel	May be used as an agent channel if confirmed.	To confirm in discovery.
Excel trackers	Starting point for CRM data load and field validation.	Trackers need to be provided and reviewed.

06 | HUMAN APPROVAL AND GUARDRAILS

Human-in-the-loop control is part of the scope. Agents prepare, route, log, draft, and track. Noblestride decides, approves, discloses, sends, grants access, and commits.

Area	Guardrail
NDA's and contracts	No signing, acceptance, or contractual action happens automatically.
Client onboarding	No lead becomes an active deal without review, validation, and deal lead assignment.
Confidential information	No confidential client, investor, partner, or internal information is shared automatically.
VDR access	No VDR access is granted without internal approval and the correct signed NDA.
Investor outreach	Initial external outreach and material sharing stay subject to review and approval.
Commercial terms	The system does not commit Noblestride to timelines, fees, exclusivity, pricing, or transaction terms.
Restricted investors	Excluded or greylisted investors do not receive opportunity visibility.

07 | INVESTOR VISIBILITY

Investor visibility is controlled by stage. The intent is to help relevant investors discover matching mandates while protecting confidential information and internal discussions.

Stage	Investor Can See	Hidden
Pre-interest	Basic profile, sector, target profile, deal type, requested ticket size, and limited operating indicators.	Full financials, IM, model, VDR, client contacts, other investors, internal notes.
After NDA	More detailed financial information and approved	Other investors, engagement contracts,

	investor materials, subject to Noblestride approval.	internal messages, offers, and client responses.
Due diligence	Approved DD files and deeper transaction materials where access has been granted.	Internal Noblestride discussion and third-party identities not approved for disclosure.

08 | REPORTING

The dashboards should give Noblestride a working view of the business, not just static reports.

- Pipeline overview by active/inactive status, deal lead, transaction type, sector, and ticket size.
- Deal status and stage history.
- Investor engagement by deal, investor, review status, rejection, completion, and historical activity.
- Disbursement tracking by deal, investor, year, and quarter.
- Referral and partner conversion tracking.
- Team workload, task status, and overdue actions.
- Advisory dashboard only if Advisory Engagement is confirmed in scope.

09 | DELIVERY APPROACH

The implementation is expected to run for 4 to 6 weeks from the Effective Date, within the 3-month Proof of Concept. Final dates will be confirmed at kickoff, subject to access, data availability, and timely approvals.

Phase	Indicative Timing	Focus
Discovery and configuration confirmation	Weeks 1-2	Validate workflows, confirm data model, access matrix, picklists, users, integrations, and open items.
Build and configuration	Weeks 2-5	Configure CRM records, relationships, agents, WhatsApp/email capture, website intake, visibility gates, and dashboards.
Deployment and onboarding	Weeks 5-6	Load agreed data, deploy the configured flows, walk the team through the system, and begin PoC usage.
PoC review and refinement	Months 1-3	Run against live operations, refine configuration, review usage, and prepare post-PoC decisions.

10 | CLIENT INPUTS NEEDED

The following items need to be confirmed with Noblestride during discovery and kickoff.

- Whether Advisory Engagement is included in the PoC or remains out of scope.
- Final picklist values and team-member user list.
- Full Term Sheet Deals and disbursement tracking logic.
- Complete investor field set and which fields are mandatory.

- Sub-sector taxonomy depth.
- API/admin access for SharePoint, Outlook, WhatsApp, website, and any confirmed internal channel.
- Named system access coordinator.
- Open NDA vs Closed NDA handling for investor visibility and VDR access.
- Existing trackers, templates, files, and sample data for initial load.

11 | ASSUMPTIONS AND OUT OF SCOPE

The scope assumes timely access to Noblestride systems, data, stakeholders, and approval decisions.

Included Assumption	Out of Scope Unless Separately Agreed
Initial CRM configuration is based on the agreed Phase 1 records and available trackers.	Workflows, integrations, or features not described in this SOW.
Agents support and structure workflows, but do not replace management approvals.	Automated production of teasers, IMs, models, valuation reports, or legal documents.
Integrated systems are available through confirmed API/admin access or an agreed alternative.	Custom integrations with systems not listed or confirmed during discovery.
Existing data is loaded to the extent agreed during kickoff.	Large historical data restructuring beyond the agreed initial load.
Commercial terms remain governed by the Enterprise Agreement and relevant appendix.	Automated negotiation, commercial commitments, or outbound commercial decisions.

12 | ACCEPTANCE

By signing below, both parties confirm that this client-facing Statement of Work is the agreed basis for Phase 1 configuration and delivery.
