

Noblestride Capital Concept Note for Automating Transactions Advisory Services

As a transactions advisory company Noblestride Capital has over 800 pipelines of potential deals for investment in Africa targeting investors across the world, especially the PE Funds, DFIs and strategic investors seeking investment in various sectors in Africa.

We intend to create an online platform where we can upload all our deals, enable an investor to login review the deal tracker of more than 800 companies, review the teaser, sign an NDA via docsign review the financial model and IM, send us an expression of interest on the deal, schedule a call directly with the management team of the target company via Teams call, where we are the once scheduling it and can record the telcom via read.ai, issue a term sheet, allow the investor to access the virtual data room on the same online platform, we should have the visibility on what the investor is reviewing on the data room, allow them to download information with watermarks from the data room.

The platform should allow the investor schedule onsite due diligence and have a team of legal expert support the preparation of loan agreements or share purchase agreements. In all these steps Noblestride Capital should be in copy and be the once leading the discussion process.

We will earn a commission of 2% on each deal closed on our platform on equity and debt. We will have the contract signed with the target company before onboarding them on our platform, so this can be tracked off the system or invoiced on milestone based on the progress of the deal. For example, we invoice the client once the deal has received a Term sheet, or advanced to onsite due diligence.

The platform's main idea will be to increase visibility for our deals to international investors, automate our fund-raising process and help our clients' close deals much faster. The platform should enable Noblestride Capital upload client's historical data, NDA, Term sheet templates etc, we should also enable the investor to share their own NDAs or term sheets etc. We will have specific Noblestride Capital employee tracking and managing the deal, we will have target company's management or shareholder team's emails on the platform to enable the investor schedule calls with them via the ecosystem. The platform will target the investors, we will manually onboard the target companies once they have signed up an engagement contract with Noblestride Capital, we have assessed their ability to raise money and done KYC prior to onboarding them on the platform, however investors can sign up automatically via the platform via a two factor authentication on their official company email, we will diligence and approve the investors to avoid brokers onboarding our platform to steal our deals.

The platform's main objective is to use AI for investor behaviour tracking, predictive deal matching, and automating parts of the due diligence process. Automate and integrate AI into our transactions advisory process. Investors should be able to search deals by country, by sector, by size, by deal type -debt or equity, by stage early or late stage, by ticket size USD1 to 4mn etc

We already have 2000+ PE funds, DFIs etc that we share deals with manually via email that we will like to onboard on the platform too. We have their email addresses and their investment criteria, the system should be able to suggest to them a new deal that has been uploaded that fits their investment criteria, the system should be able to use AI to remember each investor's

investment criteria, what they want to invest in, the deals they don't want shared with them or suggested to them etc. If we get an email from an investor saying we don't want to invest in a particular country or sector or stage of growth, the system should be able to remember this. Sometimes, investors say they can consider the deal next year, if the deal is still available the system should be able to send them a notification. Noblestride Capital team member managing the deal should be able to push notification or send email to the investor working on this deal, the system should be able to track emails sent, and notify the Noblestride capital project lead where an email has not been responded to or a deliverable is pending. We can integrate the system with our office 365, using AI the system should be able to access our email correspondence on the specific deals each team member is working on.

Proposed step-by-step breakdown of how to implement this platform and suggestions for technology:

1. Platform Overview & Core Requirements

- **Deal Upload & Management:** Upload and manage deal teasers, financial models, and information memoranda (IMs) in a structured, searchable format.
- **Investor Access & Onboarding:** Secure login for investors, with role-based access to information based on the stage of the deal.
- **NDA Signing:** Integration with e-signature platforms (e.g., DocuSign) for investors to sign NDAs.
- **Document Review & Monitoring:** Allow investors to review documents, with visibility on their activities and what they are downloading (watermarked).
- **Video Conference Scheduling & Recording:** Schedule and host calls via Microsoft Teams, with the ability to record using tools like Read.ai.
- **Data Room:** Create a virtual data room with access control and activity tracking for due diligence.
- **Term Sheets & Agreements:** Allow for templated NDAs, term sheets, and other legal documents, with the flexibility for investors to upload their own versions.

- **Automation & AI:** Use AI for investor behavior tracking, predictive deal matching, and automating parts of the due diligence process.
- **Commissions Tracking:** Automate the tracking of commissions (2%) on closed deals.

2. Key Technologies & Platforms

- **Web Development:**
 - **Custom-Built Platform:** You can develop a fully custom platform using technologies like **React.js** (front-end) and **Node.js/Express** (back-end) or **Django (Python)** for secure, scalable web apps.
 - **Low-Code Platforms:** For faster development, low-code platforms like **Bubble.io** or **OutSystems** might help build the first version with limited custom coding but full functionality.
- **Deal Management Software:**
 - **DealRoom** or **Ansarada:** These are M&A-focused platforms that can be customized to fit your needs, especially for virtual data rooms, document tracking, and investor interaction.
 - **HubSpot** (custom CRM): With integrations like **HubSpot** or **Salesforce**, you can build deal tracking and pipeline management, connecting CRM features to your website.
- **E-Signature & Document Sharing:**
 - **DocuSign** or **HelloSign** for NDA and term sheet signing.
 - **Intralinks** or **Box** for secure, permission-based document sharing with watermarks.
- **Virtual Data Room:**
 - **Firmex** or **iDeals** for advanced virtual data rooms that allow you to control document access, monitor activities, and track what investors download or view.
- **Video Conference Scheduling:**
 - Use **Microsoft Teams** API integration for scheduling and holding meetings. You can integrate with **Read.ai** to automatically record meetings and transcribe conversations.
- **AI Features:**
 - **Document AI:** For automating document management, you can use **Google Cloud Document AI** or **Microsoft Azure AI** for document extraction and insights.
 - **Investor Activity Monitoring:** Track investor interactions using AI for predictive analytics to suggest follow-up actions or prioritize hot leads.

- **Natural Language Processing (NLP):** Implement NLP for chatbots to assist investors with frequently asked questions or quick queries.

3. Security & Compliance

- **Data Encryption:** Ensure all documents are stored with industry-standard encryption (AES-256) for both at-rest and in-transit data.
- **Investor Privacy:** Implement GDPR and other regulatory compliance for investor privacy and data handling.
- **Two-Factor Authentication (2FA):** Ensure investors use 2FA for secure access to the platform.

4. Implementation Process

1. **Discovery & Planning:** Define the detailed requirements and scope of the platform.
2. **Design UI/UX:** Work with a design team to create a seamless user interface for both investors and Noblestride Capital.
3. **Platform Development:**
 - Build the core platform with an emphasis on deal pipeline management.
 - Integrate key features such as document sharing, e-signatures, video conferencing, and data rooms.
4. **Testing:** Thoroughly test the platform for functionality, security, and performance before launching.
5. **Launch & Support:** Roll out the platform with ongoing technical support and regular updates for new features.

5. Ongoing Features

- **Predictive Deal Matching:** Use AI to automatically suggest deals to investors based on their past interactions and interests.
- **Investor Analytics Dashboard:** Provide investors with dashboards showing their deal pipeline, status of NDAs, and scheduled calls.
- **Legal Workflow Automation:** Build tools to automate legal document preparation, especially around loan agreements and share purchase agreements, with legal team collaboration features.

Suggested Starting Points

- **Platform:** Begin with a **custom-built platform** if you have a long-term vision, but consider starting with a **low-code solution** for a faster MVP (Minimum Viable Product).
- **Tech Stack:** Consider using **React.js/Node.js**, combined with cloud services like **AWS** or **Google Cloud** for scalability and AI integration.

- **Document Management:** Leverage a service like **DocuSign** for e-signatures and **Intralinks** or **Firmex** for secure document management.

This will give Noblestride Capital a professional, scalable platform that not only manages your 800+ deals but also enhances investor engagement, automates key processes, and speeds up deal closure.

To implement this AI-enabled platform for Noblestride Capital, you should follow a structured, phased approach. Here's a breakdown of how you can go about building and launching this platform effectively:

1. Define Detailed Requirements

- **Goal:** Clarify the platform's purpose, features, and how it will automate and streamline your deal management and investor interactions.
- **Features List:** Break down the exact features you need, such as:
 - Secure investor login
 - Deal pipeline display (800+ deals)
 - Teaser review, NDA signing, financial model/IM access
 - Document tracking and watermarks
 - Call scheduling via Teams, call recording with Read.ai
 - Virtual data room with access tracking
 - Term sheet and legal agreement management
 - Commission tracking on closed deals
- **User Flows:** Map out the journeys for both internal users (Noblestride team) and external users (investors) so that each step of the process is clear.

2. Engage a Development Team

- **Internal vs External Team:** Decide whether to build the platform with an internal development team or hire an external firm. If you don't have in-house expertise, hiring a software development company with experience in financial services platforms is recommended.
- **Technology Stack:** Ensure the development team uses a technology stack that supports scalability and security:
 - **Front-end:** React.js, Angular, or Vue.js for dynamic, user-friendly interfaces.
 - **Back-end:** Node.js/Express or Django (Python) for handling business logic and integrating with various APIs.
 - **Database:** Use a cloud-based database like **PostgreSQL** or **MongoDB** for scalability.

- **Cloud Infrastructure:** Deploy the platform on **AWS** or **Google Cloud** for flexibility and security.

3. Design UI/UX

- Hire a UX/UI design team to create a professional, intuitive interface for both your internal team and investors. The platform should have:
 - A clean dashboard displaying the deal pipeline.
 - Clear pathways for investors to review deals, sign NDAs, and access documents.
 - Seamless scheduling of calls and due diligence steps.
 - Easy-to-use data rooms and document management.

4. Build Core Features in Phases

Phase 1: Basic Platform

- **Deal Pipeline:** Build the deal management dashboard where investors can log in and view your deals.
- **Document Upload/Download:** Create functionality for uploading deal teasers, financial models, and IMs.
- **E-Signature Integration:** Integrate **DocuSign** or **HelloSign** to allow NDA signing on the platform.
- **Video Call Scheduling:** Integrate with **Microsoft Teams** API to schedule calls and meetings.
- **Investor Tracking:** Implement tracking to monitor investor activities on the platform (e.g., document views, downloads).

Phase 2: Advanced Features

- **Data Room:** Develop a virtual data room with access control and tracking features. Enable watermarking for document downloads.
- **Call Recording:** Add **Read.ai** for recording and transcription of investor calls.
- **AI for Investor Activity:** Implement AI to monitor investor behaviors and suggest follow-up actions or prioritize active investors.

Phase 3: Automation & Legal

- **Term Sheets & Legal Docs:** Develop a system for generating and reviewing term sheets and legal agreements. Allow investors to upload their versions as well.
- **Commission Tracking:** Build in the ability to automatically track and calculate Noblestride's 2% commission on closed deals.
- **Historical Data Upload:** Enable the platform to upload past deal data and templates for NDAs, term sheets, etc.

5. Security & Compliance

- **Data Encryption:** Ensure all sensitive data (documents, financial models, etc.) is encrypted both in transit and at rest using **AES-256** encryption.
- **Two-Factor Authentication (2FA):** Implement 2FA for investor logins to enhance security.
- **GDPR Compliance:** Make sure the platform adheres to privacy regulations like GDPR for handling investor data, especially if you're dealing with European investors.

6. Testing & Quality Assurance

- **Functional Testing:** Test the platform thoroughly to ensure all features (e.g., document uploading, e-signature, data rooms) work as expected.
- **Security Testing:** Conduct penetration testing to ensure the platform is secure from breaches.
- **User Acceptance Testing (UAT):** Allow a small group of investors and internal team members to test the platform and provide feedback before the public launch.

7. Launch the Platform

- **Soft Launch:** Start with a soft launch for a limited number of investors and deals. This will allow you to identify and fix any issues that may arise.
- **Marketing:** Promote the platform to global investors, highlighting its ease of use, automation features, and the ability to streamline deal processes.
- **Training:** Provide training to both the Noblestride Capital team and key investors on how to use the platform efficiently.

8. Ongoing Support & Updates

- **Technical Support:** Set up a dedicated technical support team for handling any platform-related issues or questions.
- **Continuous Improvement:** Regularly update the platform with new features based on user feedback and emerging technologies.
- **Scaling:** As your deal pipeline grows, ensure the platform scales smoothly in terms of both performance and investor capacity.

Key Success Factors:

- **Security:** Investor and deal data should be highly secure.
- **Automation:** Aim to automate as much of the administrative work as possible.
- **Investor Experience:** Ensure the platform is intuitive and adds value by simplifying the due diligence process.
- **Scalability:** Build a platform that can handle an increasing number of investors, deals, and documents without performance issues.

Conclusion:

By following these steps, Noblestride Capital can build a robust platform that not only automates fundraising and deal management but also enhances investor engagement. Start small with core features and scale as you gather feedback from users. In the end, the platform will help you attract global investors, increase deal visibility, and accelerate deal closure, all while providing you with better oversight of the entire process.

Workflow for Noblestride Capital's AI-Enabled Transactions Advisory Platform

1. Deal Upload and Investor Registration

- **Target Company Onboarding:**
 - Noblestride Capital manually assesses potential deals, performs KYC, and signs engagement contracts with the target companies before uploading deals to the platform.
 - Deals include teasers, NDAs, financial models, and Information Memorandums (IMs).
- **Investor Registration:**
 - Investors (PE funds, DFIs, and strategic investors) register through a two-factor authentication process using their official company email.
 - Noblestride Capital approves the investors to prevent unauthorized brokers.
- **AI Integration:**
 - The platform remembers each investor's preferences, such as sector, country, ticket size, and stage of investment. AI ensures deals fit the investor's criteria.
 - Investors can opt out of certain deals, and the system tracks if a deal can be reconsidered in the future, sending notifications when applicable.

2. Deal Review Process

- **Investor Deal Access:**
 - Investors log in to view available deals based on filters like country, sector, size, ticket range, and stage (early or late).
 - Investors review teasers and other materials uploaded by Noblestride Capital.
- **NDA Signing:**
 - Investors sign NDAs using an integrated DocuSign feature before accessing confidential information.

- **Document Access:**

- After signing the NDA, investors access financial models, IMs, and other critical documents in the Virtual Data Room (VDR).
- Investors can download documents with watermarks for additional security.

3. Investor-Target Interaction

- **Expression of Interest:**

- Investors can send an expression of interest (EOI) via the platform.

- **Scheduling Calls:**

- The system allows investors to schedule a call with the target company's management via Teams, managed by Noblestride Capital.
- The call is recorded via integrated tools like Read.ai, with Noblestride Capital included in all discussions.

4. Due Diligence and Negotiation

- **Term Sheet Issuance:**

- Upon EOI, Noblestride Capital facilitates the creation of term sheets, with templates available on the platform.

- **Virtual Data Room (VDR) Access:**

- Investors gain access to a VDR where they can review sensitive documents.
- Noblestride Capital tracks investor interactions with the VDR, including what they review, download, and comment on.

- **Onsite Due Diligence Scheduling:**

- Investors can schedule onsite due diligence through the platform, with integrated scheduling for legal experts to prepare agreements (loan or share purchase).
- A premium service allows investors to access Vendor Due Diligence (DD) prepared by Noblestride Capital for an additional fee.

5. Tracking and Automation

- **Automated Investor Notifications:**

- AI ensures investors receive deal suggestions that match their criteria.
- The system sends reminders or notifications if a deal matches an investor's interest for future consideration.

- **Email Tracking and Follow-ups:**

- Integrated with Office 365, the platform tracks email correspondence related to deals.

- Noblestride Capital team members are notified of pending responses or deliverables.
- Automated reminders and email follow-ups can be triggered based on investor interactions or milestones.

6. Milestone Invoicing and Commission

- **Milestone-Based Invoicing:**

- Noblestride Capital tracks deal progress and invoices clients based on milestones, such as when a term sheet is issued or onsite due diligence is scheduled.

- **Commission Tracking:**

- A 2% commission is charged on closed deals (both debt and equity) facilitated through the platform.
- Contracts and invoicing are tracked, with visibility into the progress of each transaction.

7. Security and Compliance

- **Investor Screening:**

- The platform performs investor diligence to ensure that only qualified investors gain access to deals.

- **Confidentiality and Access Control:**

- Sensitive documents are protected with NDAs, watermarked downloads, and restricted access controls.

- **Integration and AI:**

- The system integrates with Noblestride Capital's Office 365 for seamless communication tracking.
- AI is used for behavior tracking, predictive deal matching, and automating parts of the due diligence process.

Key Deliverables for the Developer:

- User-friendly dashboard for uploading, managing, and tracking deals.
- Two-factor authentication and investor approval processes.
- Integration with DocuSign for NDA management.
- Advanced VDR features for document review, watermarked downloads, and tracking.
- AI-driven deal matching and investor behavior tracking.
- Teams integration for scheduling calls and recording meetings.

- Automated email and notification system integrated with Office 365.
- Milestone-based invoicing and commission tracking functionality.

This workflow will increase deal visibility, automate the fundraising process, and help close deals faster while maintaining Noblestride Capital's leadership in deal discussions.
